

ПК5а – резултати

14 - Иван	Подробно си писал валидации <pre> 4 references public string ChildName { get { return childName; } set { childName = value; } } 3 references public int ProductionTime { get { return productionTime; } set { if (value >= 0) productionTime = value; } } </pre> Кодът работи, но можеше да се оптимизира по-добре – методите да бъдат извън Main(), да се използват вградените .MaxBy() и т.н. Има забележки, но предвид, че дори не си в Classroom - 6 <pre> static void Main(string[] args) { List<Gift> gifts = new List<Gift>() { new Toy(1, "Bob", 60, "crowbar"), new Toy(2, "Alex", 50, "coal"), new Toy(3, "Bill", 60, "crowbar"), new Book(4, "Boris", 35, 250), new Book(5, "Max", 45, 350) }; gifts[0].DisplayInfo(); gifts[1].DisplayInfo(); gifts[2].DisplayInfo(); gifts[3].DisplayInfo(); gifts[4].DisplayInfo(); } </pre>	6
15 - Ивелина	Много правилно си работила, проблемът ти е по-скоро от видимост (обхват) на промеливите.	6

	<pre>6 static void Main(string[] args) 7 { 8 9 AddDecorations(); 10 LongestTime(); 11 HighestDecoration(); 12 ShowDetails(string searchSpecialGuest); 13 TotalSetupTime(); 14 15 } 16 17 private static void TotalSetupTime() 18 { 19 TotalSetupTime += SetupTime; 20 }</pre> 2 references 1 reference 6 Errors 0 of 3 Warnings 7 Messages Build + IntelliSense <table><tr><th>Code</th><th>Description</th></tr><tr><td>CS1525</td><td>Invalid expression term 'string'</td></tr><tr><td>CS0103</td><td>The name 'searchSpecialGuest' does not exist in the current context</td></tr><tr><td>CS1003</td><td>Syntax error, ',' expected</td></tr><tr><td>CS1656</td><td>Cannot assign to 'TotalSetupTime' because it is a 'method group'</td></tr><tr><td>CS0103</td><td>The name 'SetupTime' does not exist in the current context</td></tr><tr><td>CS1061</td><td>'Program.Decoration' does not contain a definition for 'PlaceSetting' and no accessible extension method 'PlaceSetting' accepting a first argument of type 'Program.Decoration' could be found (are you missing a</td></tr></table>	Code	Description	CS1525	Invalid expression term 'string'	CS0103	The name 'searchSpecialGuest' does not exist in the current context	CS1003	Syntax error, ',' expected	CS1656	Cannot assign to 'TotalSetupTime' because it is a 'method group'	CS0103	The name 'SetupTime' does not exist in the current context	CS1061	'Program.Decoration' does not contain a definition for 'PlaceSetting' and no accessible extension method 'PlaceSetting' accepting a first argument of type 'Program.Decoration' could be found (are you missing a	
Code	Description															
CS1525	Invalid expression term 'string'															
CS0103	The name 'searchSpecialGuest' does not exist in the current context															
CS1003	Syntax error, ',' expected															
CS1656	Cannot assign to 'TotalSetupTime' because it is a 'method group'															
CS0103	The name 'SetupTime' does not exist in the current context															
CS1061	'Program.Decoration' does not contain a definition for 'PlaceSetting' and no accessible extension method 'PlaceSetting' accepting a first argument of type 'Program.Decoration' could be found (are you missing a															
16 - Ивет	Правилно си се сетила да закоментираш неработещ код! Браво! <pre>var minTimeDecoration = decorations.MinBy(d => d.SetupTime); Console.WriteLine(\$"Украсама с най-кратко време за подгреждане е {minTimeDec //List<TableDecoration> specialGuestDecorations = //Console.WriteLine("Украсама за масама за специалния гост: "); //foreach (var d in specialGuestDecorations) //{ // d.DisplayInfo(); //}</pre>	6														
17 - Йоан	Направил си 3 различни списъка за отделните играчки, а можеше само 1 с родителя:	5														

```

static void Main(string[] args)
{
    List<Gift> allGifts = new List<Gift>();
    List<Toy> toys = new List<Toy>();
    List<Book> books = new List<Book>();

    Toy toy1 = new Toy(1, "Камелия", 30, "конструктор");
    Toy toy2 = new Toy(2, "Станам", 45, "кола");

    Book book1 = new Book(3, "Ивелина", 20, 200);
    Book book2 = new Book(4, "Ивелина", 20, 200);

    toys.Add(toy1);
    toys.Add(toy2);

    books.Add(book1);
    books.Add(book2);
}

```

P => p. липсва, за да се изчисти грешката, а books е недостъпна, понеже е вътре в Main(), а ти си отделил метода извън него.

18 - Калоян		
19 - Крис	this. се използва за private, за да има разлика при дублиране на малките букви, а в случая е изпишно при public с главни	6

```

2 references
public int Id { get; set; }

4 references
public string KiddoName { get; set; }

2 references
public int ProductionTime { get; set; }
public static int TotalProductionTime = 0;

2 references
public GiftForChildren(int id, string kiddoName, int productionTime)
{
    this.Id = id;
    this.KiddoName = kiddoName;
    this.ProductionTime = productionTime;
    TotalProductionTime += productionTime;
}

```

Вложил си творчество в текстовете – използвал си вградени методи, единствено трябваше целия код да не бъде в Main()

```

List<GiftForChildren> GiftForChildrens = new List<GiftForChildren>();
GiftForChildrens.Add(new Toy(101, "Берзчо", 40, "конструктор"));
GiftForChildrens.Add(new Toy(102, "Севга-Мария", 30, "кукла"));
GiftForChildrens.Add(new Book(201, "Тошо Толстой", 20, 150));
GiftForChildrens.Add(new Book(202, "Пайлър Пан", 25, 300));

Book maxBook = GiftForChildrens.OfType<Book>().OrderByDescending(b => b.PageCount).First();
Console.WriteLine($"мале, най-голяма книга: {maxBook.GetGiftForChildrenLabel()}");
double avgTime = GiftForChildrens.OfType<Toy>().Average(t => t.ProductionTime);
Console.WriteLine($"охо, средно време за играчка: {avgTime}");

List<Toy> constructors = GiftForChildrens.OfType<Toy>().Where(t => t.ToyType == "конструктор").ToList();
Console.WriteLine($"уха, намерени конструктори: {constructors.Count}");
Console.WriteLine($"ааааа, общо време за всичко: {GiftForChildren.TotalProductionTime}");

```

20 -
Любомир

Всичко работи, отделял си методите извън Main()

6

21 -
Мартин

Всичко работи, ама само 1 метод в Main()??? Браво, експериментираш с вградени методи

6

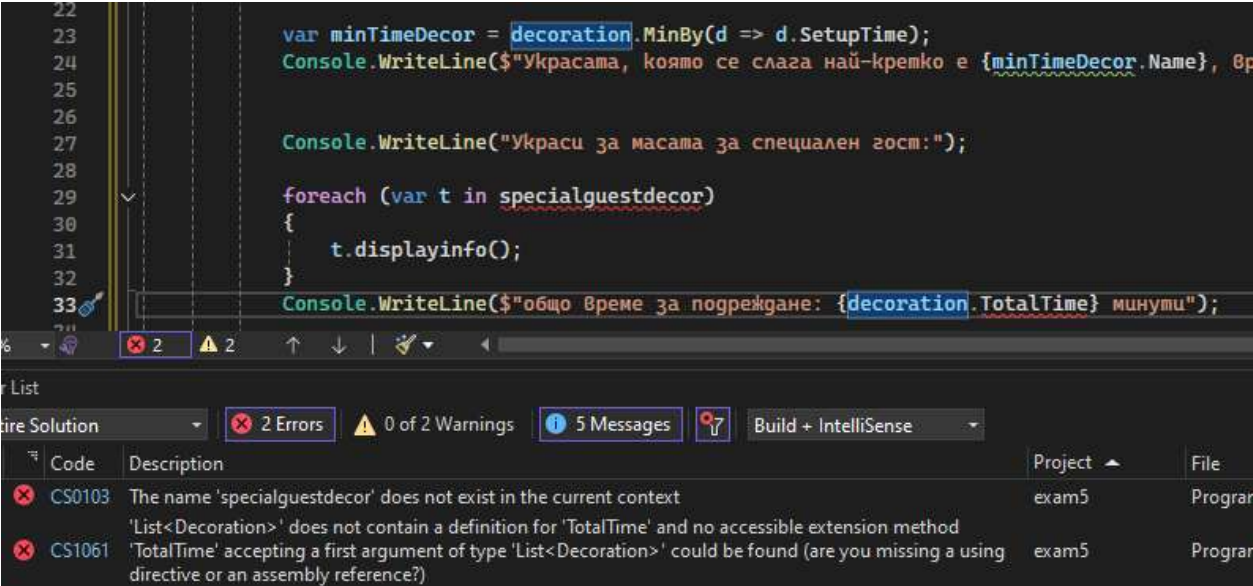

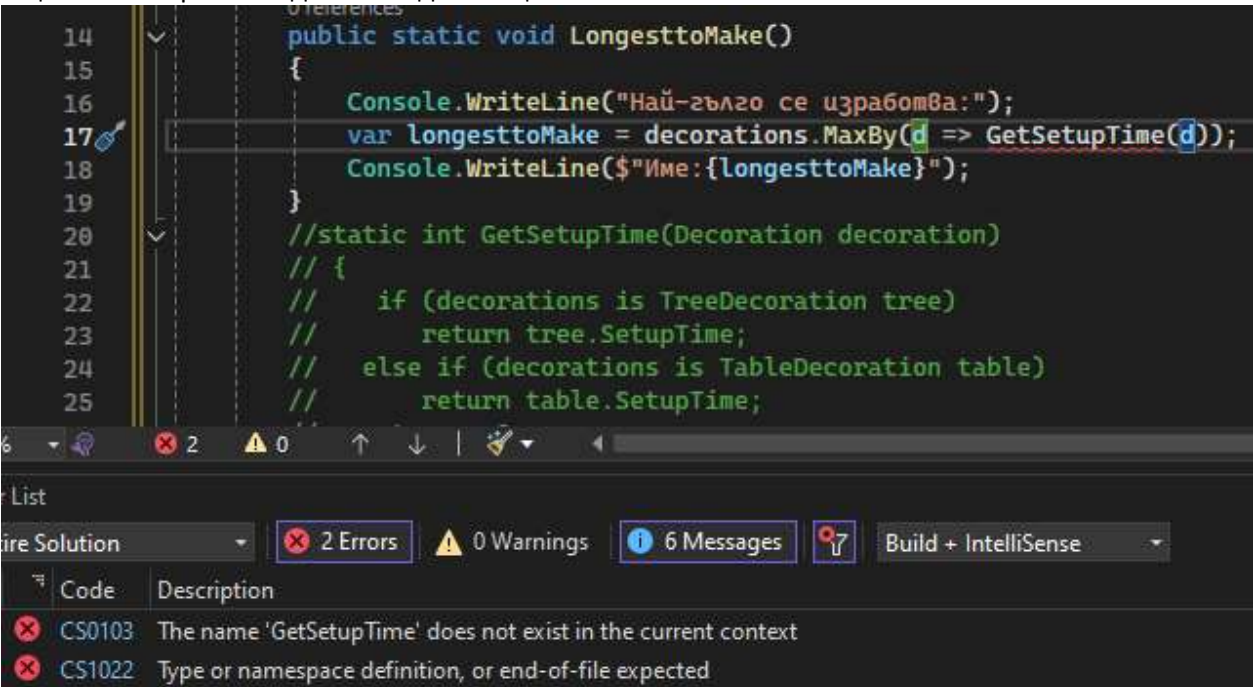

```

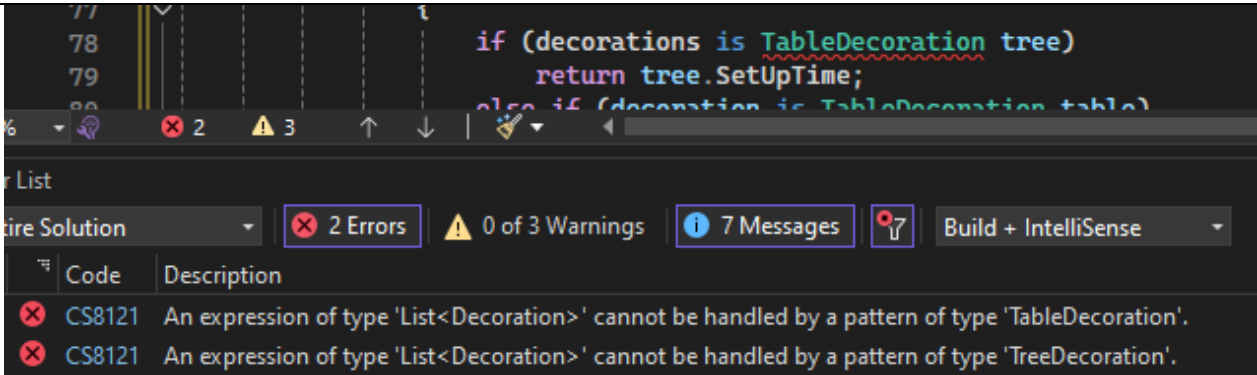

0 references
static void Main(string[] args)
{
    Calculate();
}

1 reference
public static void Calculate()
{
    List<Gift> gifts = new List<Gift>
    {
        new Toy(1, "Мартин", 30, "ръкавици"),
        new Toy(2, "Евгения", 45, "букеет от книги"),
        new Toy(3, "Алекс", 50, "конструктор"),
        new Book(4, "Анна", 60, 120),
        new Book(5, "Георги", 80, 200)
    };

    Book maxPagesBook = gifts.OfType<Book>().OrderByDescending(b => b.Id).FirstOrDefault();
    maxPagesBook.DisplayInfo();
}

```

22 - Мая	Не разпознава decoration с малка буква, както си написала името на списъка. Трябвало е буквата да бъде главна Decoration както е родителят – тогава грешката се изчиства. Също, методите не са извън Main().  <pre>22 23 var minTimeDecor = decoration.MinBy(d => d.SetupTime); 24 Console.WriteLine(\$"Украсама, която се слага най-крепко е {minTimeDecor.Name}, вре 25 26 27 Console.WriteLine("Украси за масама за специален гост:"); 28 29 foreach (var t in specialguestdecor) 30 { 31 t.displayinfo(); 32 } 33 Console.WriteLine(\$"общо време за подреждане: {decoration.TotalTime} минути");</pre> 2 Errors 0 of 2 Warnings 5 Messages Build + IntelliSense <table><thead><tr><th>Code</th><th>Description</th><th>Project</th><th>File</th></tr></thead><tbody><tr><td>CS0103</td><td>The name 'specialguestdecor' does not exist in the current context</td><td>exam5</td><td>Program</td></tr><tr><td>CS061</td><td>'List<Decoration>' does not contain a definition for 'TotalTime' and no accessible extension method 'TotalTime' accepting a first argument of type 'List<Decoration>' could be found (are you missing a using directive or an assembly reference?)</td><td>exam5</td><td>Program</td></tr></tbody></table>	Code	Description	Project	File	CS0103	The name 'specialguestdecor' does not exist in the current context	exam5	Program	CS061	'List<Decoration>' does not contain a definition for 'TotalTime' and no accessible extension method 'TotalTime' accepting a first argument of type 'List<Decoration>' could be found (are you missing a using directive or an assembly reference?)	exam5	Program	5
