

## DetailsPageTable

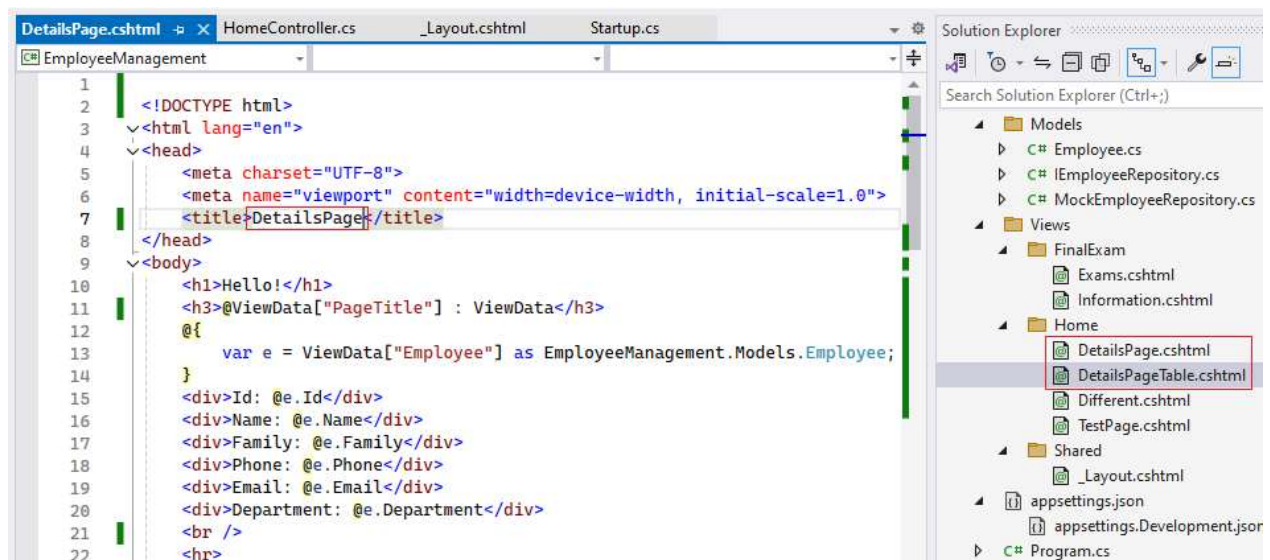

За по-добра нагледност, ще подредим нашите DTO – data transfer objects в изглед с таблица – в контролера копираме DetailsPage метода и новият преименуваме на DetailsPageTable:

```
0 references
public IActionResult DetailsPage()
{
    Employee model = _employeeRepository.GetEmployee(1);
    ViewData["PageTitle"] = "Employee Details";
    ViewData["Employee"] = model;
    return View(model);
}

0 references
public IActionResult DetailsPageTable()
{
    Employee model = _employeeRepository.GetEmployee(1);
    ViewData["PageTitle"] = "Employee Details";
    ViewData["Employee"] = model;
    return View(model);
}
```

По същия начин копираме изгледа DetailsPage.cshtml -> DetailsPageTable.cshtml и в него създаваме таблица с 4 заглавия и 4 клетки, която попълваме с кода от DetailsPage:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4     <meta charset="UTF-8">
5     <meta name="viewport" content="width=device-width, initial-scale=1.0">

7 </head>
8 <body>
9     <h1>Hello!</h1>
10    <h3>@ViewData["PageTitle"] : ViewData</h3>
11    @{
12        var e = ViewData["Employee"] as EmployeeManagement.Models.Employee;
